

Living Earth Memory Work

Living Earth Unit

Biomes

Deserts are dry and dusty places,
Hot all day, so water is scarce in these spaces.
The grassland is a prairie or pasture,
There are few trees and much grass for the
horse and rancher.
The forest is full of different trees.
It has distinct layers that let plants grow with
ease.
The arctic is a cold and icy land.
The ground is forever frozen, and the landscape
is bland.
The aquatic zones are full of water.
Oceans and wetlands have fish and otter.

The Four Seasons

The short days of winter are filled with cold and
snow.
In spring, it warms as the flowers begin to grow.
The long days of summer are hot and green.
In all, the changing leaves create a beautiful
scene.
